

# Palmer Wind Farm

## CONSTRUCTION UPDATE

### Tilting towards the future.

Thank you for your patience as we have undertaken work on Randell Road between Palmer and Tungkillo. The two permanent site access points are close to being completed.

The first Community Consultative Committee (CCC) meeting was held last week. Meeting notes will soon be added to the project website.

### What's happening on site?

The project team is:

- completing the permanent site access points on Randell Road between Palmer and Tungkillo,
- continuing to construct the internal road network,
- creating turbine foundations (as shown in the photo to the right),
- constructing a temporary creek crossing ahead of installing the permanent structure, and
- preparing for fence line corridors.

We appreciate your patience as project traffic increases. If you are concerned about the impact to you on the road or your property, we are offering to provide a car dash cam, or a driveway camera.

**See the next page for more information about what is happening and the dashcam/camera offer.**

## Traffic impacts and offer to provide dashcam/driveway camera

### Traffic

- Project deliveries will use state highways and enter site from the new Randell Road entry points.
- Vehicles will move around site via the access roads we build. There will only be a limited number of other vehicles using local roads where needed.
- We are actively working with drivers and contractors to protect community safety. All project drivers are required to comply with speed limits, road rules and approved traffic management plans. We also continue to liaise with SA Police as part of our traffic planning and compliance.
- Over Size and Over Mass (OSOM) deliveries of turbine parts will commence in 2027.

### Offer of dash cams or cameras for your driveway

- We acknowledge that our project is bringing additional traffic to the area.
- If you are concerned about the impact to you on the road or your property, as an additional reassurance measure, we are offering to provide a dash cam for your car or camera for your driveway. These cameras can help document any traffic or property concerns so they can be investigated promptly by the project team.
- If you would like to take up this offer, please contact us via phone and email, explain what you need and whether you live on Randell Road close to the wind farm or regularly use that section of Randell Road. Those living closest to the wind farm site will be prioritised.

## Blasting

Blasting is being used during construction of the wind farm to efficiently break through hard rock. Controlled blasting involves pre-planned and safe use of small explosive charges to break up rock. There are four stages of blasting which include:

1. Pre-drilling the rock with a series of holes,
2. Loading the holes with small charges and other materials,
3. Electronically detonating the charges in a timed sequence, which results in the rock being broken up into small, removable pieces, and
4. Removing the dislodged rock.

The community can expect the following on days when rock blasting occurs:

- SMS notifications sent out by 10am before all blasts occurring between 10am-4pm.
- People in close proximity (approximately 500m) of the blasting area may hear and feel it. Minimal noise and vibration impacts will be experienced outside of the blasting area

## Community drop-in sessions

We are holding monthly community drop-in sessions and warmly welcome anyone to drop in any time to chat

If you would like to meet after hours, let us know and we'll organise a time on Wednesday 28 October.

**Next drop-ins: Wednesday 28 October 2026**

**Palmer Collier Park Hall: 11:30am - 1:30pm**

**Tungkillo Soldiers Memorial Hall: 3:00pm - 4:30pm**
